Short Background of the Fund	UNDP Lebanon is finalizing the structure of the Lebanon Green Investment Facility (LGIF) to establish a partnership among financial institutions aimed at creating a dedicated platform for private sector investments, driving Lebanon's green transition and recovery. The project seeks to deliver bankable projects that are gender-responsive, with robust measurement, reporting, and verification systems to contribute to Lebanon's emission reduction and increase climate resilience. With Lebanon's updated Nationally Determined Contribution (NDC) outlining targets for emission reductions and adaptation, the LGIF aims to provide accessible and affordable climate and green financing through blended finance instruments for the private sector. Comprising two integrated entities, the LGIF investment structure and the technical assistance unit within UNDP, the project is poised to significantly boost investments in climate-positive projects, enhance coordination among donors and the private sector, and improve the efficiency of fund utilization.
How to apply?	Will be announced. For more information contact UNDP Lebanon.
